

365-AM Asset Management

A real-time dynamic Asset Management solution powered by Microsoft Business Applications

Many organisations struggle to manage their whole asset base in a single system. 365-AM is built to manage ALL assets anywhere. The result? Real-time data insight and effective business operations. Cloud 2020 will help you see clearer with a customised solution tailored to your business.

365-AM

365-AM is an asset management application designed by Asset and Facilities Management professionals, built to increase the effectiveness and profitability of any business, through intelligent asset and facilities management.

Why customers use 365-AM?

- ✓ Better Asset Tracking
- ✓ Reliable Incident Reporting
- ✓ Proactive Maintenance Recording

All managed in a single platform

Increased profitability

- Reduced maintenance and operational expenditure costs, as well as down time for critical infrastructure as a result of condition-based Asset Management
- Track & Monitor Condition & Usage with real time data to make decisions on Replace or Repair
- Extended lifecycle of assets

Increased productivity and efficiency

- Increased quality and consistency of all business operations, recovery of wasted time and removal of inefficient practices
- Reporting and Analytics tailored to each organisational level (Director, Manager and Operations), enabling a more cohesive overview of business performance

Data systems built to support statutory compliance

- Accountable Board level Dashboards and insight of the entire organisational deployment of any company asset
- Management Dashboards help managers deliver their daily responsibilities for all business activities
- Safer working environments

'365-AM has allowed us to completely revolutionised how we think about all our Assets. No more silo mentality. Everything is linked to everything in one easy to use solution'
