MIGRATIONWIZ FROM BITTITAN

Small and large enterprises alike are moving their workloads to the cloud and between tenants. But manual migration costs time and money. Resellers must seize the opportunity to offer a fast, simple, and scalable cloud migration solution to their customers.

Introducing MigrationWiz by BitTitan. This industry-leading SaaS platform allows users to effortlessly move multiple workloads to the cloud and between tenants – whether it's mailboxes, documents, personal archives, or public folders. As the solution is fully automated, there's no need for specialist training or expertise – meaning more migrations in the same timeframe, all at a lower cost.

WHY MIGRATIONWIZ?

Fast

MigrationWiz is 100% SaaS-based, so it uses best-in-class APIs from Google and Microsoft to transfer files at unmatched speeds. Help your customers achieve large migrations in less than a weekend.

Scalable

MigrationWiz uses the flexibility of the cloud to scale up or down based on project size – so it can migrate several thousand users at once. To prevent errors when dealing with high user counts, it logs every item migrated and provides key information about project status.

Simple

Through a single, customisable interface, users can manage both small and large migrations with no prior training. Every MigrationWiz licence comes with plenty of resources for guidance. And if your customers ever get stuck, BitTitan have a 24/7 technical support team that can help solve their project roadblocks.

Secure

To safeguard company data, customers can use temporary admin credentials for email migrations and app-based authentication for document migrations. From encryption to data retention, BitTitan adheres to relevant security standards, practices and controls.
