Advanced Security + Endpoint Detection and Response (EDR)

for **Acronis** Cyber Protect Cloud

Early-access: Q1 2022

THE ONLY EDR DESIGNED FOR MSPS, WITH NO SECURITY EXPERTISE REQUIRED

Current EDR solutions require extensive and costly security expertise, such as internal SOC team or MDR services. In addition, you need to have a suite of other solutions to respond to and remediate the threat fully.

Acronis Advanced Security + EDR enables you to quickly and easily detect, visualize and analyze advanced threats and hacking techniques that bypass other security layers. That's because its easy-to-understand interpretation of attacks empowers MSPs to rapidly investigate, respond, remediate and recover.

ENHANCE YOUR SECURITY SERVICE TECH STACK WITH STREAMLINED INCIDENT INVESTIGATION AND RESPONSE

Combine the power of threat prevention and detection	Analyze attacks within minutes	Recover business operations faster
Prevent most threats from becoming breaches while increasing the visibility of the attack flow. Empower your team to detect and respond to advanced attacks, which bypass other protection layers, such as advanced persistent threats (APTs).	Eliminate incident-analysis complexity with an automatic attack chain interpretation that every team member can understand. Automatically correlate events pertaining to an incident without needing to analyze hundreds of lines of logs.	Enable hyper-efficient remediation with centralized response management. Empower your team with an unmatched array of responses to investigate and remediate the threat, recover data and close existing security gaps.

*Advanced Security + EDR includes all the functionalities of Acronis Cyber Protect Cloud and Advanced Security.

Command a premium for your expertise

- **Achieve higher revenue per client** with advanced security services that are otherwise unavailable in the MSP market
- **Control your TCO and enable better margins** with easier service-tiering using a single, integrated platform for backup and disaster recovery, next-generation anti-malware, email security, workload management and EDR capabilities

Maintain your margins and prevent runaway costs

- **Spend less time on incident investigation** by unlocking minutes-not-hours threat analysis and response
- **Eliminate the need for highly-skilled security personnel** such as external SOC teams and MDR services
- **Gain end-to-end visibility** over all steps of the attack with automatic correlation of events

### Minimize risks for clients and strengthen their security posture

- **Provide faster remediation andrecovery** – centralize incident response through integrations with other cyber protection technologies
- **Detect and respond to advanced threats** – catch threats that bypass preventive security layers
- **Prepare forensic and breach reports with ease** – pass more audits and simplify regulatory compliance

ACHIEVE RAPID INCIDENT ANALYSIS AND RESPONSE FOR CLIENTS WITH UNMATCHED SIMPLICITY

Easy-to-understand interpretation of attacks	Unmatched threat response capabilities	Multifaceted event correlation	Effortless deployment	Centralized cyber protection via a single console
Rely on your team regardless of its security expertise. Understanding incidents and how to respond to them is easy: the interpreted attack chain shortens incident analysis from hours to minutes.	Centralized management enables you to deliver an unmatched array of responses: investigation, threat remediation, data and system recovery and preventive measures against similar future threats.	Empower your team to see beyond standard events on client workloads. The unique integration of data protection, next-generation anti-malware, and EDR offers far greater visibility.	Enable the delivery of EDR services to your clients with just the flick of a switch. Once Acronis Cyber Protect Cloud agent is installed, you'll minimize provisioning overhead.	Control your TCO, reduce management overhead and boost margins using a single solution that integrates backup, disaster recovery, next-generation anti-malware, email security, workload managementand EDR.

Cut your average threat investigation and response time to a few minutes

- Embolden your team to effortlessly analyze attacks, regardless of their level of expertise

- Narrated incidents are easy to interpret, emphasizing the objectives of each step and the artefacts targeted by the attacker
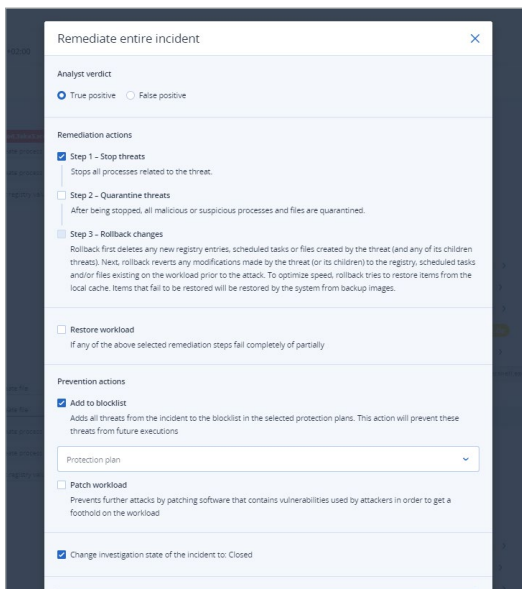

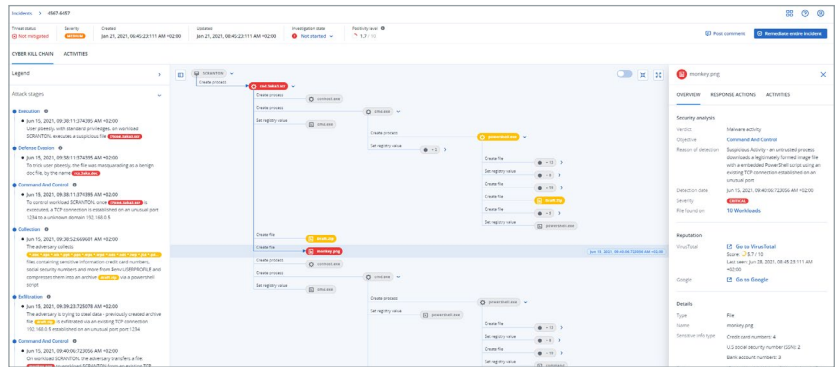

Mount a more comprehensive response than ever before

IInvestigate

- Investigate threats with a secure, remote connection to workloads and automatically save forensic data in backups for follow-up audits and investigations

Remediate

- Remediate the threat by isolating the workload, killing malware processes, quarantining the threat and enabling fast rollback of any changes made to clients' workloads

Recover business operations

- Recover lost or affected data due to breaches and minimize downtime withintegrated best-of-breed backup and disaster recovery

Prevent

- Prevent future breaches by closing security vulnerabilities leveraged in the attack with patch management and blocking analyzed threads from being executed

Early-access to Advanced Security + EDR
