

# The most powerful application to manage Microsoft 365 Security

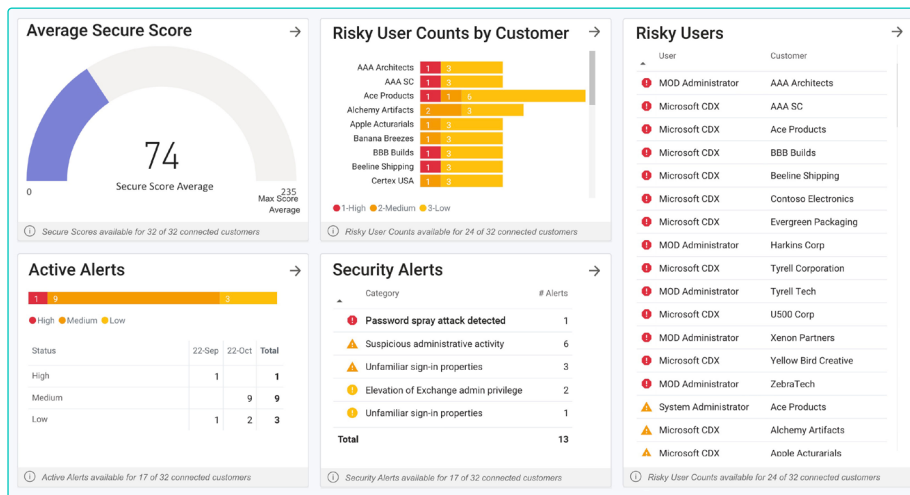

Easily deliver and monetize cloud security

## Problem

- SMB Customers are focused on security given the constant stream of cyber-attacks and breaches
- MSPs are experiencing this through a dramatic increase in Microsoft 365 Security Related Tickets
- Microsoft 365 Secure Score is a measurement of a organization's security posture. Security Manager empowers you to act on the insights and improve your security baseline across all customers.

## Solution

Our main challenge right now is to see how our customer tenants are configured and how their Secure Score is looking. Right now we manage about 100 tenants. Security Manager is a great benefit as we can see everything in one interface..."

*Nicole Gutmann, Systems Engineer  
MTF Solutions (EMEA Partner)*

## Value Proposition

### Find it

Discover security vulnerabilities across all your customers

## Features

- ✓ Add Microsoft 365 customers fast through Partner Center Integration
- ✓ Security Dashboards leveraging Microsoft Graph API technology

## Benefits

- ✓ Deliver meaningful security discussions through actionable insights
- ✓ Identify security risks & vulnerabilities across customers through a single pane of glass

### Fix it

Protect customers and efficiently resolve problems

- ✓ Out-of-the-Box security workflows ready to use on the most common Microsoft 365 scenarios (MFA, anti-phishing, DLP)

- ✓ No new hiring, reskilling or PowerShell expertise required
- ✓ Address M365 vulnerabilities to ensure compliance and customer satisfaction

### Automate it

Grow recurring revenue by fully scaling your MSP security bundle

- ✓ Leverage scheduling and continuous monitoring automation
- ✓ Build and customize your own security workflows through No-Code tools

- ✓ Easily package and deliver security services to increase MRR
- ✓ Improve security baseline across all customers through automation
